Portfolio: menagasweety.github.io/Menaga-Portfolio

CAREER OBJECTIVE

BSc IT graduate (CGPA 9.52) seeking an entry-level Data Analyst role. I clean, audit, explore and visualize real-world data with Python, SQL and Excel, then communicate practical insights through clear analysis. My projects demonstrate data preparation, EDA, rule-based analysis, regression modeling and dashboard-style delivery, while I continue building statistics and machine learning depth.

SKILLS

Languages & Querying: Python, SQL
Data Analysis & Visualization: Data Cleaning, EDA, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Excel
Generative AI & Apps: Gemini API (google-genai), Prompt Design, Streamlit, Jupyter Notebook
Databases & Tools: MySQL, Git, GitHub, AI-assisted development tools
Knowledge & Learning: Statistics; currently learning Power BI and Machine Learning

PROJECTS

Customer Feedback Analysis & Automated Response | *Python, Pandas, Gemini API, Streamlit*
GitHub: github.com/Menagasweety/customer_feedback_analysis | Live App | App Code

- Built a rule-based workflow on 3,600 public electronics reviews to find urgent complaints and draft replies faster.
- Audited the data first (0 exact duplicates, 25 missing review texts) and kept the original text next to a cleaned copy.
- Flagged 687 Critical reviews (1-2 stars, 19.08%) and counted complaint themes with an 11-category dictionary and Counter; audio was the top theme.
- Picked the top 3 cases with a fixed priority order, so the results are the same every run.
- Used the Gemini API to draft empathetic support emails with prompt rules against invented refunds or policies; a human approves every draft.
- Added input-validated interactive testing and deployed the project as a Streamlit app.

Employee Wellness & Workplace Mental Health Analysis | *Python, Pandas, Seaborn, Plotly*
GitHub: github.com/Menagasweety/employee-wellness-analysis

- Cleaned a 1,048-record HR survey (24 variables): duplicates, invalid ages, inconsistent categories, missing data.
- Ran univariate, bivariate and multivariate EDA; family history had the strongest link to treatment-seeking (0.38) and 48.81% of employees reported treatment.
- Treatment reporting was 73.02% with a family history vs 33.59% without; many employees did not know if mental health benefits existed, so I recommended clearer communication of support resources.

Seoul Bike Sharing Demand Regression | *Python, Pandas, Scikit-learn, Excel, Streamlit*
GitHub: github.com/Menagasweety/seoul-bike-demand-regression

- Built an end-to-end regression workflow on 8,760 hourly records using weather, calendar, season and operating-day features.
- Performed Excel and Python EDA, data auditing and feature engineering; compared Linear Regression, Gradient Boosting and Random Forest using chronological holdout evaluation.
- Reported RMSE, MAE and R^2, analyzed permutation feature importance, and packaged the workflow in a Streamlit prediction app.

California House Price Prediction | *Python, Pandas, Scikit-learn, Streamlit*

GitHub: github.com/Menagasweety/california-house-price-prediction

- Developed a house-price prediction project with data preparation, exploratory analysis and Ridge Regression using scikit-learn.
- Created an interactive Streamlit interface so users can enter housing features and review model predictions.

Simple Linear Regression — Study Hours | *Python, Pandas, Matplotlib, Scikit-learn*

GitHub: github.com/Menagasweety/simple-linear-regression-study-hours

- Implemented a beginner-friendly supervised learning workflow to predict exam scores from study hours.
- Visualized the relationship, trained a scikit-learn Linear Regression model and evaluated predictions for clear interpretation.

INTERNSHIP EXPERIENCE

Data Analytics Intern, Imarticus Learning (1 month)

- Coffee Sales Analysis: cleaned and analyzed retail sales data in Excel and SQL to find trends in product performance and revenue.
- Phone Addiction Study: analyzed survey data in Python and Google Collab to explore smartphone usage patterns and create dashboards and had a presentation of it.

EDUCATION

BSc Information Technology, University of Mumbai | CGPA: 9.52

Data Science Program (ongoing), Imarticus Learning

WRITING

Medium Blog

- Generative Adversarial Networks (GANs): The Ultimate Mind Game
- The Detective Who Taught OpenCV to Find What the Eye Couldn't
- The Model That Learned From Its Mistakes

DECLARATION

I hereby declare that the information furnished above is true and correct to the best of my knowledge and belief.
